

Netflix Content Analysis Dashboard

Project Overview

The Netflix Content Analysis Dashboard is an interactive Power BI project designed to explore and analyze Netflix's content library. The dashboard provides insights into content distribution, growth trends, geographical availability, genres, ratings, and the proportion of Movies versus TV Shows.

The project demonstrates data cleaning, transformation, modeling, DAX calculations, and dashboard development using Power BI.

Objective

The primary objective of this project is to:

- Analyze Netflix content trends over time.
 - Compare Movies and TV Shows available on Netflix.
 - Identify top content-producing countries.
 - Examine content ratings and genre distribution.
 - Create an interactive dashboard for business insights.
-

Tools & Technologies Used

- Power BI Desktop
 - Power Query
 - DAX (Data Analysis Expressions)
 - CSV Dataset
 - Data Visualization
-

Dataset Information

The dataset contains information about Netflix titles, including:

- Show ID
- Title
- Type (Movie / TV Show)
- Director
- Cast
- Country
- Date Added
- Release Year
- Rating
- Duration
- Genre

Data Cleaning & Preparation

The following data preparation steps were performed:

1. Imported CSV dataset into Power BI.
 2. Converted Date Added into Date format.
 3. Converted Release Year and Duration into numeric format.
 4. Removed unnecessary null values.
 5. Created Year Added field.
 6. Split and transformed Genre data for analysis.
 7. Created DAX measures for KPI calculations.
-

DAX Measures Created

Total Titles

Measures the total number of Netflix titles.

Total Movies

Calculates the total number of Movies.

Total TV Shows

Calculates the total number of TV Shows.

Average Movie Duration

Calculates the average duration of movies.

Movie Percentage

Shows the percentage share of Movies within total content.

Total Countries

Counts the number of unique countries represented in the dataset.

Dashboard Components

KPI Cards

- Total Titles
- Total Movies
- Total TV Shows
- Total Countries

- Average Movie Duration

Visualizations

Netflix Content Growth by Year

Analyzes content additions over time and compares Movies and TV Shows.

Movies vs TV Shows Distribution

Shows the proportion of Movies and TV Shows using a Donut Chart.

Netflix Content by Country

Displays global content distribution by country.

Top Content Genres

Highlights the most popular genres available on Netflix.

Content Distribution by Rating

Analyzes audience ratings and content classifications.

Content Releases Over Time

Tracks content release trends across years.

Key Insights

- Movies account for the majority of Netflix content.
- Content growth increased significantly after 2015.
- The United States contributes the largest share of Netflix titles.
- Drama and International content dominate the platform.
- TV Shows represent a smaller but steadily growing portion of the catalog.
- Netflix content is distributed across numerous countries worldwide.

Business Value

This dashboard enables stakeholders to:

- Understand content distribution patterns.
 - Identify popular genres and ratings.
 - Track growth trends over time.
 - Evaluate global content availability.
 - Support content acquisition and strategic decisions.
-

Conclusion

The Netflix Content Analysis Dashboard successfully transforms raw data into actionable insights through interactive visualizations and KPI tracking. The project demonstrates practical skills in data cleaning, data modeling, DAX calculations, and dashboard design using Power BI.
